Of course, it doesn't slow down the system at all and it works smoothly on all Windows versions. Users interested in FinitySoft BMI Calculator can download the setup from Wednesday afternoon, a senior employee at the Department of Energy (DOE) may have revealed a secret key in one of the nation's largest nuclear reactors. The employee, who is not a nuclear engineer but is responsible for an equipment maintenance system inside the plant, sent a message to one of his colleagues via email with what appears to be a "secret" number for a hand-held scanner. "Maintenance Manager has given me access to his IPad (Blackberry) for entry into this site," the email read. "He will be monitoring the screen while I scan the key. The only other person with the code is the staff in our control room." The DOE did not respond to VICE News' request for comment about the incident. The plant in question is the Palo Verde Nuclear Generating Station near Phoenix, Arizona. It has been shut down since January 2014 due to problems with the steam generator system, an industrial system that allows a reactor to generate heat, or steam. The DOE found an issue with an automatic inspection camera (AIC), which was designed to constantly watch the tubes of the steam generators. But it has been turned off and the site has been shut down while the problem is being fixed. When the plant opened in 1976, the AIC system was needed to watch the tubes. But in 2007, the DOE changed the design of the system to make the cameras turn off after 1,000 hours of operation. Reactors are constantly on and off, because they have to be refueled every few years. The reactors at the Palo Verde plant have been shut down since
