MSSQL To MySQL

A complete tool to migrate from SQL Server to MySQL. Microsoft SQL Server is a powerful database system for storing large amounts of data. However, once you need to migrate your data to MySQL or any other database, you have to come up with a migration strategy to get the right result. Although it may be possible to extract all the information from SQL Server and insert it into MySQL, it is a very time-consuming task. Moreover, the possibility of having data loss is always a concern. If the problem is that you are transferring a large amount of data, a wizard-based application such as MSSQL to MySQL may be the right solution. Its advanced wizard-based system lets you quickly select the source and destination databases and apply a wizard-based method to initiate the data migration. MSSQL to MySQL Description: The migration of databases from SQL Server to MySQL, including the conversion of views, indexes or just individual tables. Because it is a migration tool, Microsoft SQL Server to MySQL has a feature to store the migration settings as a profile, so you can quickly start a new migration task next time you need to migrate the database. Alternatively, if the SQL Server database is available and the connection to the MySQL database is active, then data can be uploaded directly to MySQL, so no local copy is created. This allows you to create a new table with all the columns of the original one and upload the data to it. Q: Opening folder icon on desktop This is possibly a stupid question, but how do I change the icon that appears on my desktop to a file folder? I have tried the steps from this post and nothing has worked so far: How to set the icon for the start menu? I have tried these paths: C:\Users\USERNAME\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\System C:\Users\USERNAME\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\Startup But they have no effect. A: As it turns out, when you go to the Start Menu Settings, there is a Folder Options option. There, under Icons and List, is a section titled Show Desktop Icons. There are a few other folders options there as well, like Show all desktop icons, which is the default. A: Right click on desktop and select Properties, then click on Icons tab. II

Is it possible to create a pivot table in MySQL with a column that has all of the values for the current row that can be either numerical or textual? A: To do this, in MySQL, I would probably use a view to concatenate the string into a numeric column. If you're looking to do this in SQL Server, perhaps you can give this a try: CREATE TABLE TableA ([Name] VARCHAR(MAX), [ID] INT, [Object] VARCHAR(MAX)) CREATE TABLE TableB ([ID] INT, [Name] VARCHAR(MAX), [Object] VARCHAR(MAX)) INSERT INTO TableA (Name, ID, Object) VALUES ('test', 1, 'object1'), ('test', 2, 'object2'); INSERT INTO TableB (ID, Name, Object) VALUES (1, 'test1', 'object1'), (1, 'test2', 'object2'), (2, 'test3', 'object3'); -- Join TableA and TableB on Object where Name is the same SELECT A.[Name], B.[Object] FROM TableA A INNER JOIN TableB B ON A.[Object] = B.[Object] WHERE A.[Name] = 'test' DROP VIEW IF EXISTS TableA_View; CREATE VIEW TableA_View AS SELECT A.[Name], B.[Object] FROM TableA A INNER JOIN TableB B ON A.[Object] = B.[Object] DROP VIEW IF EXISTS TableB_View; SELECT * FROM TableA_View dummy(); \$this->setExpectedException('mageekguy\atoum\exceptions\atoum_exception'); Sobj
