BeKEY Crack Free Download X64

-- convert QWERTY into Dvorak -- number from 0-99 to let you use multiple keyboards/languages/alphabets -- backspace -- use "expand" to add one space after every word -- delete "expand" to add one space before every word -- expand until "next word" or "next line" or "eol" -- backspace until "eol" or "eol-before" or "prev word" -- double click on the word "next word" or "prev word" or "eol" -- type the first letter of the word you want to input -- type the last letter of the word you want to input -- type the word "next word" or "prev word" or "eol" -- type the number of the word "next word" or "prev word" or "eol" -- "keystroke" to copy or highlight the word you want -- "keystroke" to search the word "next word" or "prev word" or "eol" -- "keystroke" to select the word "next word" or "prev word" or "eol" -- "keystroke" to insert the word "next word" or "prev word" or "eol" -- "keystroke" to paste "next word" or "prev word" or "eol" -- "keystroke" to cut "next word" or "prev word" or "eol" -- "keystroke" to find "next word" or "prev word" or "eol" -- "keystroke" to replace "next word" or "prev word" or "eol" -- "keystroke" to execute the word you typed -- "keystroke" to click the "next word" or "prev word" or "eol" -- "keystroke" to open the "next word" or "prev word" or "eol" -- "keystroke" to the line "next word" or "prev word" or "eol" -- "keystroke" to the word "next word" or "prev word" or "eol" -- "keystroke" to start the "next word" or "prev word" or "eol" -- "keystroke" to end the "next word" or "prev word" or "eol" 1d6a3396d6

beKEY is a software application whose purpose is to help you offer suggestions in order to complete the words you are currently typing via a virtual keyboard. Clean looks The tool places a virtual keyboard on your desktop which can be moved to several preset locations or placed to a custom screen position. In addition, you are allowed to quickly enable or disable the text prediction mode and text macros. There's support for two different keyboard layouts and you can easily switch between them. Aside from the virtual keyboard which looks easy to decode, the program accommodates several configuration settings under the hood so be prepared to take some of your time to discover them. How it works beKEY gives you the possibility to input text in a third-party text editor or other software programs via the virtual keyboard. As soon as you start clicking on the virtual keys, the application automatically reveals a list with several text predictions. A simple click on a target word is sufficient for inserting data into a text editor. In a similar way, you may add text macros (e.g. date, time). Configuration settings You are allowed to change the looks of the virtual keyboard by making adjustments to the color scheme, key border, font size, round keys, and transparency. What's more, you can choose between different keyboard layouts (e.g. German, English, Numeric keypad), enable a compact mode, quickly change the language of the dictionary from the GUI, hide function keys, show multimedia keys, as well as set up the word prediction process in terms of algorithm used for displaying suggestions (Intelligent, Last Used, Most Used, Alphabetical) and sorting options (by probability or alphabetical order). You can also make beKEY add space after words, remove space before punctuation, and capitalize the first word of the sentence. The utility lets you select the preferred language of the dictionary (e.g. English, German, Arabic, Italian), add or remove words to/from the dictionary, and sort the words included in the dictionary by a certain letter. Last but not least, you can set up custom text macros, enable a touchscreen mode, and back up settings to a file so you can restore them in case something does not go according to the plan. Final words and performance assessments All things considered, beKEY comes in handy in case you are not a fan of a physical keyboard. If you are looking for a virtual replacement with text predictions that help you type faster, you can give this app

What's New In BeKEY?

A very simple way to increase your typing speed. When you're about to type a word, beKey automatically suggests a choice for you. So you don't have to look up the word.
