Burton, a 17-year-old student at a private school in California, found herself in a bitter debate about just that. "She is the smartest kid in the class," said her mother, Katrina Burton. "That's why I think it is so important that she gets the appropriate diagnosis."

The Burton's are less than two miles from the University of California, Los Angeles' college of medicine, where Sarah has been identified by officials as a "golden child."

Golden children, it turns out, are an enduring trope. "It's a role people want for themselves, to be the 'golden child,'" said Marya Hornbacher, a psychologist who studies children in elite cultural environments. "It's about this idea of being best in the entire world. It's about a culture of competition and trying to keep up." Burton's dilemma has resonated with many others, especially middle and high schoolers in the middle class who often don't want to be told what to do by their parents or teachers.

At the same time, parents and educators have their own more specific anxieties: A child is turning down prerequisites for college; she's getting low grades; she's flunking the SAT. Often, though, it's more subtle. Parents wonder why they're raising a teenager: Will she be any happier 20 years down the road? The idea of becoming the "golden child" has ancient roots. The Greek philosopher Plato asserted that no one has ever done worse with any fewer or greater advantages. Plato wrote about the birth of his friend, the artist Socrates, who grew up in a wealthy aristocratic family. Later, the

Addiction is an important medical condition with behavioral and physical components that can be treated. We are finally realizing that the condition is not a behavior or an identity, but rather a disorder with an underlying cause that can be identified. This has led to clinicians recognizing addiction, not as a sin or a moral failing, but as a medical condition. Patients with addiction will not only be pleased by the realization that they do not have an identity or a moral failing, but they will also be pleased by the realizations that addiction is a treatable medical condition, and not just a lack of self-control.

The first time that this realization took place, the founder of the disease was dismissed as a quack and was investigated by the medical profession as the dangerous radical he was. He was burned at the stake by the church in France in 1533 as a charlatan, but quickly became the focus of scientific attention. In France, Switzerland, Italy, Germany, and Britain, doctors started to identify the phenomenon, raise money, and organize care. This period is known as "The Dark Ages of the Treatment of Addiction". With the discovery of opioid receptors in the brain, it became possible to understand how we, as humans, can become addicted to substances and develop a chemical dependency. While there were many Americans who were used to drinking, opium was not natural to the body and was primarily consumed by the Chinese. In the 1800s, the American Public became enamored by the Chinese lifestyle and began using opium in a more widespread fashion. Demand for opium soared in America and across Europe. As addiction continued to be socially unacceptable, the U.S. government began to enforce the international ban. It was not until 1911, when morphine was successfully synthesized, that the opium ban was lifted. Thus, the War on Drugs began as a war for control of the substance. The availability of drugs to the public increased. Doctors began to understand that when patients were addicted, they could no longer control their use of drugs. This meant that medical students were working on patients who were in withdrawal. Thus, the medical profession became involved in drug policy and in the future would be the point of intervention when patients were addicted and in withdrawal. In the 1920s and 1930s, when morphine became illegal, doctors and the general public believed that addiction and opiate abuse were synonymous.
