
Namirial Termo 2.21

DOWNLOAD NOW

Namirial Calcola includes the possibility to calculate: Product Cost; Product Cost, including all costs plus margins; Cost factor for the different cost items. Based on the data entered in the table it is also possible to create a cost. line. The input into the calculation of the cost and profit is done from the various parameters included in the bill of materials and the drawing itself. Namirial Termo has four modules: Project Cost, Cost factor, Cost Items and Cost calculation. All the data and information necessary to perform the calculation are entered at the desired level of detail. Namirial SelfTermo is an application created by Namirial, a leader in digital design for over 40 years, with the purpose of representing the company's specific way of working. It is composed of three distinct functions: Self-installation, Self-management and Self-promotion. Design is the most important factor in the success of your company. The realization of ambitious projects requires creativity, a huge amount of work, commitment and experience. In this case, the job has been made easier with the hire of Autocad and the application Termo, an innovative application that will allow you to design and print professional quality graphic products for printing and electronic transmission. The software Namirial can be used for any type of energy certification, from energy payback to energy audit. Source: Namirial. Namirial Termo. Download Certificate. Namirial Certificato Energetico.
